User manual Print-In Process

Put the USB-cable in your pc, check if there is paper in the drawer.

(Load the paper with the printable side face-down)

In the box in which your Print-In Plates arrived, you can find a leaflet with the license key to create your artwork on peleman.com.

Before printing check if the settings are on 'actual size' and 'automatic orientation'.

> Print your artwork in mirror on Print-In Paper.

> You can print more than one image on one page.

Press the "on" button on the right and heat up the Print-In Press up to 195° Celsius, and 140 seconds.

Remove the protective sheet from the Print-In Plate

Position the printed picture face up on the press. Then, put the Print-In plate face down on the image.

Tip: By fixing the plate to the paper with **Print-In** Thermal Tape, unwanted shadow prints are avoided when opening the press.

Place a **protective paper** before closing the press to avoid the plate from sticking to the heating component.

Once the press has reached the right heating temperature, close it and wait for 140 seconds. Warning: the press will be really hot.

Wait for the beeping sound before opening the press.

Make sure to use the **heat resistant gloves** for taking out the Print-In Plate.

Wait at least 1 minute before touching the plate, as this is very hot so it is best to wait a while.
