User manual Print-In Process

PELEMAN
Make it Tangible
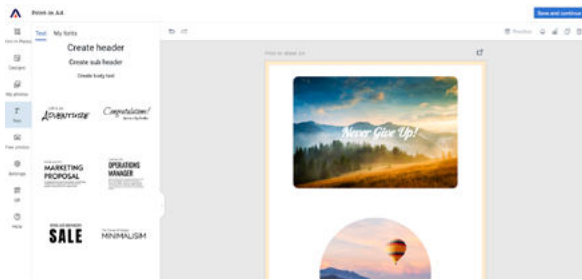

1 Put the USB-cable in your pc, check if there is paper in the drawer.
(Load the paper with the printable side face-down)

2 In the box in which your Print-In Plates arrived, you can find a leaflet with the license key to create your artwork on peleman.com.

3 Before printing check if the settings are on '**actual size**' and '**automatic orientation**'.

> Print your artwork in mirror on Print-In Paper.

> You can print more than one image on one page.

4 Press the "on" button on the right and heat up the Print-In Press up to **195° Celsius, and 140 seconds**.

5 **Remove the protective sheet** from the Print-In Plate

6 **Position the printed picture face up** on the press. Then, put the Print-In plate face down on the image.
Tip: By fixing the plate to the paper with **Print-In Thermal Tape**, unwanted shadow prints are avoided when opening the press.

7 Place a **protective paper** before closing the press to avoid the plate from sticking to the heating component.

8 Once the press has reached the right heating temperature, close it and wait for 140 seconds.
Warning: the press will be really hot.
Wait for the beeping sound before opening the press.
Make sure to use the **heat resistant gloves** for taking out the Print-In Plate.

9 Wait at least 1 minute before touching the plate, as this is very hot so it is best to wait a while.

Accessories

Print-In Thermal Tape 20mm – 33mm
